WHAT'S NEW?

While there are plenty of so-called "novelties" released annually, few become outstanding, for real improvements are as difficult to achieve as they are valuable to the progress of our business. Every industry is necessarily looking for something new. The following new varieties are our own production and have stood the test of several years' watching in our greenhouses.

PETUNIA

Ball Fringed Violet Blue

Truly an outstanding Petunia, with its attractive fringed flowers of rich, velvety Elk's Pride purple. Its free flowering habit and uniformly compact growth make this variety unexcelled for pot plant or bedding use. We have been assured of a good supply of seed. Tr. pkt., \$1.00; $\frac{1}{64}$ oz., \$2.00; $\frac{1}{32}$ oz., \$3.80.

MARIGOLD

Ball Giant Orange →

An exceptionally uniform strain of the popular *Fistulosa* or quilled-petal type Marigold. Its deep orange flowers improve All Double Orange both in size and percentage of doubles. Tr. pkt., 35c; $\frac{1}{4}$ oz., 65c; 1 oz., \$2.00.

TWO FINE BEGONIAS

Ball Red (New)

Picture a Begonia of fairly dwarf, perfectly rounded habit, literally covered with medium large flowers of the brightest scarlet red imaginable. That's the new Ball Red. Under actual growing conditions here in our greenhouses we find it not only early flowering, but of a brilliance that makes either King of the Reds or Luminosa seem dull by comparison. We are limiting the modest amount of seed we have at this time to one packet per customer. Will be available in quantity about August 1st. Limit, one tr. pkt., \$1.00.

Begonia—Ball White

Marigold—Ball Giant Orange

Begonia Ball White

An ideal companion variety to grow with the new Ball Red, being very much like that variety in habit of growth but with freely produced pure white flowers that offer a striking contrast whether used in combinations or for bedding arrangements. Tr. pkt., \$1.00; $\frac{1}{64}$ oz., \$2.50; $\frac{1}{32}$ oz., \$4.50.

COLEUS

Rainbow Mixture →

This is unquestionably the finest strain of seed grown Coleus that we have ever seen. Its broad color range runs from the palest pastel pinks, through combinations of rose, orange, gold, crimson and reddish bronze shades to deep maroon; many with unusual markings. We highly recommend this mixture for bedding work and combinations. Choice specimens may be cutting propagated. All of this seed has been produced right here in our own greenhouses. Tr. pkt., 60c; $\frac{1}{32}$ oz., \$1.50.

To Our Trade

WITH A SUPERABUNDANCE of buying power in the hands of our public, general business should be quite active for 3-4, and some feel 5 years to come. What this will mean to the florist business need not be dwelt on. Since we are in a state of some inflation, what we might consider high prices, both for what we buy and sell, must be accepted as normal, and our product priced accordingly. While there are a few shortages in Petunias this season, supplies generally are close to normal. In our leading specialties—Forcing Snapdragons, Non-Branching Stocks, Begonias, Primulas, Calceolarias, Cinerarias, and Coleus—we specialize in the growing of all our own seed; and we are glad to say that our past season's harvest was an exceptionally full and fine one.

Rather than keep you waiting for items that are delayed or scarce we will substitute, where possible, with varieties equally good or better unless you say "Don't Substitute."

PETUNIAS

(About 200,000 seed per oz.)

Easily and economically grown, wide variation of uses from pot plants and combinations to bedding, combined with attractive coloring, explains the growing popularity of Petunias under every condition of our broad land. Because of continued restrictions that our California seed growers operate under, a limited number of Petunias will be in short supply again this season. Petunias are easily kept too wet and warm, becoming drawn and of little value. Watch this.

California Giants

When properly grown—cool and near the glass—the Dwarf Giants are a No. 1 pot plant in 3's or 4's. In flower they sell on sight.

*BALL DWARF GIANT No. 1

We consider this the finest uniformly dwarf strain available. Produces around 80% extra large, open throated flowers ranging in color from velvety crimson to delicate pink; and is at its very best in a 3 or 4 inch pot. $\frac{1}{2}$ Tr. pkt., 75c; Tr. pkt., \$1.25; $\frac{1}{64}$ oz., \$2.50; $\frac{1}{32}$ oz., \$4.50; $\frac{1}{16}$ oz., \$8.00.

***Ball Dwarf Giant No. 2.** Ramona Strain. More vigorous in growth than our No. 1 strain, therefore better suited for outdoor bedding work. Produces about 65% large California Giant flowers in a wide range of choice colors. $\frac{1}{2}$ Tr. pkt., 60c; Tr. pkt., \$1.00; $\frac{1}{64}$ oz., \$1.75; $\frac{1}{32}$ oz., \$3.00; $\frac{1}{16}$ oz., \$5.50.

California Giants Mixture No. 5. A very complete and attractive mixture of colors in the tall Giant class. Free flowering and fine for outdoor bedding. Tr. pkt., 75c; $\frac{1}{64}$ oz., \$1.35; $\frac{1}{32}$ oz., \$2.50.

California Giants—Supreme Florists' Strain. Fine bedding mixture in soft shades of pink, rose, and salmon. Tr. pkt., 75c; $\frac{1}{64}$ oz., \$1.50; $\frac{1}{32}$ oz., \$2.75; $\frac{1}{16}$ oz., \$5.00.

***Giant Rainbow Strain (New).** Outstanding for its unusual range of brilliant colors including coral rose and coppery-scarlet shades which we have found in no other mixture. Of fairly tall growth for bedding or limited combination use. $\frac{1}{2}$ Tr. pkt., 60c; Tr. pkt., \$1.00.

CANADIAN ALL-DOUBLES See Front Cover

A distinctly superior strain, producing 100% double flowers with a quite dwarf, compact habit. While the flowers are not quite so full petaled as some of the original strains, they are highly effective for either pot

plants or bedding. Offered in a mixture of colors pictured on front cover. Supply quite limited and will be exhausted early. $\frac{1}{2}$ Tr. pkt., (about 400 seeds), **\$1.80**; Tr. pkt. (about 800 seeds), **\$3.00**.

***All-Double America.** The popularity of this Canadian produced strain is rapidly increasing. Freely produces medium sized carnation-flowered blooms of a pleasing deep rose color. If sown early and pinched hard a couple of times, very nice 4 in. pot plants can be had for that important spring business. $\frac{1}{2}$ Tr. pkt., **\$1.20**; Tr. pkt., **\$2.00**; $\frac{1}{64}$ oz., **\$7.50**; $\frac{1}{32}$ oz., **\$13.60**; $\frac{1}{16}$ oz., **\$24.75**.

The GRANDIFLORAS

There are three distinct classes of Grandifloras: the Ruffled-edged; the Tall Fringed; and the Dwarf Fringed. Like all Petunias, the most vigorous are the tall ones. The Dwarf Fringed make ideal pot plants, but for bedding most of them do not hold up in poor dry soil. Because of its high percentage of the true type we find the finest Dwarf Fringed on our list is Ball Fringed Violet Blue, found by us in Japan some years back.

Ruffled Grandifloras

***Elk's Pride Dwarf.** Our strain of this always-popular rich velvety purple variety is admirably suited for bedding or porch boxes. Uniform in growth and a ready seller. Tr. pkt., **50c**; $\frac{1}{64}$ oz., **\$1.50**; $\frac{1}{32}$ oz., **\$2.50**; $\frac{1}{16}$ oz., **\$4.50**.

***White Queen.** Extra large, wavy pure white flowers and dwarf compact growth make this a truly outstanding Petunia. Fine for bedding or pot plant use. Tr. pkt., **75c**; $\frac{1}{64}$ oz., **\$1.75**; $\frac{1}{32}$ oz., **\$3.00**; $\frac{1}{16}$ oz., **\$5.25**.

***Snowstorm.** Fine large flowered white. Similar to White Queen. Tr. pkt., **75c**; $\frac{1}{64}$ oz., **\$1.75**; $\frac{1}{32}$ oz., **\$3.00**; $\frac{1}{16}$ oz., **\$5.25**.

***White Cloud.** Not quite as large flowered as the above two varieties, but very free flowering. Tr. pkt., **50c**; $\frac{1}{64}$ oz., **\$1.00**; $\frac{1}{32}$ oz., **\$1.75**; $\frac{1}{16}$ oz., **\$3.25**.

Burgundy. Dark Burgundy wine red with large white throat. Well ruffled. Tr. pkt., **50c**; $\frac{1}{64}$ oz., **\$1.00**; $\frac{1}{32}$ oz., **\$1.75**.

ASTERS Rot Resistant

(12000 seeds per oz.)

The strains listed by us as "resistant" were practically 100% so when released by their originators. This work definitely strengthens them, but when they meet the ever varying conditions of soil, culture and seasons, results vary accordingly. Our experience clearly points to conditions that encourage rot in any Asters. That too many transplanting checks are a cause is demonstrated by the fact that direct sowings—no transplanting—usually come thru clean. A wet June with us is usually disastrous, pointing to the fact that they can be overwatered in their early stages. Also we definitely know that with us they should not be grown in the same soil two successive seasons, especially if some rot developed, for it is carried over in the soil for 4-5 years. Our practice is to sow thinly in a cool airy greenhouse in steamed soil a month before they can be planted out, and avoid checks as far as possible in transplanting. Furthermore, we know, without question, that resistant-bred varieties will average better results than will non-resistant.

BETTER ZINNIAS (2500 to 4000 seeds per oz.)

If Zinnias for cutting are grown under the protection of cloth or glass, they become longer stemmed and finer than is possible in the open and there's money in growing them this way. Both the Dahlia Flowered Class and the Lilliputs are unexcelled for this purpose. While they come best when sown direct where they are to flower, most home gardeners prefer to buy started plants. You'll do your customers a real service and realize a better profit for yourself by offering them sturdy plants grown in Ball Better Plant Bands instead of the usual spindly transplants.

MARIGOLDS—are easily grown

(10,000 seeds per oz.)

The modern Marigolds of today include some of the finest examples of the plant breeder's art; they are truly florists' flowers. In their various forms and habits, they adapt themselves to cutting, pot plants, especially for combinations, and the Dwarf French type are showy for bedding. For any purpose their rich, warm coloring is ever appealing. *Nearly all classes are readily flowered indoors in April and May from a January or February sowing.* Most popular of the Giant African strains for cutting is the "All-Double." In growing any Marigolds under glass they must not be checked especially thru over-watering or low temperature. When this happens, they come to a standstill forcing them into buds without sufficient growth.

NOTE: The varieties Gold Improved, Yellow Supreme and Crown of Gold listed on this page have odorless foliage.

ANNUAL LARKSPUR (8,000 seeds per oz.)

A January sowing of Larkspur will flower about May, depending on temperatures. While it is sown outdoors to advantage in the fall, spring sowings do about as well if sown the first day the ground can be prepared. To draw

up long stemmed flowers, use fairly enriched deep soil and water when quite dry. Besides its use in the fresh state, we are told it can be dried. Place in water for a few hours and hang upside down in dry, dark storage.

BALL Better Florists' Snaps

FORCING VARIETIES

FOR GROWING OUT-DOORS. We find the forcing or early class excellent for this purpose, especially if the strong growing kinds are used. Not only are they earlier flowering than most of the Summer class but the colors are much more complete and more uniform. However, the original or resistant strains should be used for out-door work where rust prevails for the forcing kinds have less resistance. For out-door work in our latitude, we find that a February 1st sowing grown as cool as possible in 3 to 4 in. pots and planted out in May under cloth will produce excellent flowers by late June.

IMPORTANT!

Due to heavy increases in the cost of producing quality seed, we can no longer offer group prices or quantity discounts on Snapdragons. While we obviously have no control over the amount of seed in originator's packets, all of our own contain at least 2,000 seeds.

½ tr. pkts. of any variety priced at \$1.00 are supplied at 60¢; ½ pkts. of \$1.50 varieties, \$1.00. No. ½ pkts. on \$2.00 or \$3.00 varieties **EXCEPT WHERE NOTED.**

PLEASE NOTE

The following Snapdragon varieties are at present sold out and will not be available until the new crop is ready about June 1st. All orders placed in advance will be filled in rotation when seed is received. Until new crop is ready we will substitute as follows—

Christmas Cheer. ½ Tr. pkt., \$1.75; Tr. pkt., \$3.00. Substituting Ball Early Pink.

Maryland Pink. ½ Tr. pkt., \$1.75; Tr. pkt., \$3.00. Substituting Mary Ellen.

Gilbert's Pink. Tr. pkt., \$1.50. Substituting Rose Queen.

Fine Out-Door Snaps (175,000 seeds per oz.)

Generally, we recommend the rust-resistant varieties for out-door growing, not only because of their rust-resistance but because they are apt to be truer to type. A sowing Feb. 1st of the longer-stemmed varieties will produce an excellent crop of flowers during early summer out-doors. For flat and plant sales, sow March 1st in most sections.

“All the Best” Sweet Peas

LATE OR SUMMER PEAS

(350 seeds per oz.)

This is the original strong growing class so largely used for summer flowering. We have for years found them profitable for outdoor cutting by sowing not later than February 1st, placing 3 or 4 seedlings in a 3 in. band or pot and after hardening them in an outdoor frame, planting them out. This is done in 3 ft. spaced rows, the pot plants spaced about 8 in.; but before doing so, syringe and fumigate very thoroly, being sure they are clean of aphids. Usually they should be sprayed for aphids every 2 weeks until they flower. Failures are frequently due to not watching this point. With us they usually reach a height of 4-5 ft. and are supported with wire and string as indoors. Water should be applied when necessary. Such a start with us flowers freely the last two weeks of June.

Spring Flowering Peas (350 seeds per oz.)

For greenhouse sowing between November and February, we find this new class superior to the Early or Winter class. While their stronger growth makes them a week or 10 days later flowering, they are generally longer stemmed and last longer than the weaker growing Earlies. They are also increasingly used for outdoor planting.

POPULAR ANNUALS

For Bedding and Cutting

Under this heading we have grouped all our valuable bedding and cut flower annuals except specialties on foregoing pages. In selecting these miscellaneous items, we keep in mind the interest of the professional or commercial grower only, thereby giving meaning to our business—"Flower Seeds for Florists". Varieties of special value or that fit into most conditions and demands are indicated with an asterisk*.

We include with this catalog the number of seeds per ounce of important items listed. For example: **ACROCLINIUM**—8500 S means 8500 seeds per oz. These figures must NOT be accepted as indicating the number of plants to be expected. Under favorable germinating conditions most large seeds will germinate 50 to 60 percent.

ACROCLINIUM—**New Hybrids**. (Sensation Giants). 8500 S. Choice bright-colored Strawflowers for spring cutting. The extra large semi-double strain. Tr. pkt., **15c**; $\frac{1}{4}$ oz., **30c**; 1 oz., **\$1.00**.

BEGONIAS For your convenience we have grouped all the Fibrous Rooted Begonias into 3 classes; Tall, Intermediate and Dwarf, rather than the old and confusing classification of Semperflorens and Gracilis. BEGONIA—Fibrous Rooted Begonias, by the nature of their growth, divide themselves readily into 3 groups. WOOD BANDS ARE AVAILABLE!

Yes, Wood Veneer Plant Bands are available in any quantity this year—for those who order *early*. This means that all the advantages of Wood Bands can be yours again; no longer is it necessary to put up with makeshift substitutes.

As this catalog goes to press, the lumbermen's strike which has held up production of spruce veneer stock still appears unsettled. Pending settlement of this dispute, we have on hand limited quantities of spruce bands in the most popular sizes, but can furnish bands of all listed sizes made of other woods which our own tests have proven entirely satisfactory. Samples sent on request.

Petunia
"AMERICA"
100%
SEMI-DOUBLE

● The deep rosy carmine color, medium size and extremely free flowering habit of Petunia AMERICA give it special appeal for bedding or pot plants. It flowers freely with a double Petunia effect in 2½'s or 3's. We find that hard and repeated pinches are necessary to more freely bring out those base breaks and compactness in AMERICA. We have an excellent seed supply.
